## Tradition obliges – leading standards in design and quality

### A corporate group with tradition

For over 100 years, the owner-managed GU Group has been fascinated with the opening, swinging, closing and locking of windows and doors. Technical innovations and continual development of architectural hardware technology have and will continue to shape forces in the market, setting new standards and trends for the future.

### The Gretsch-Unitas Group

The corporate group consists of more than 50 manufacturing and distribution companies in 35 countries. With the internationally leading brands GU (architectural hardware), BKS (locks, locking systems) and FERCO (architectural hardware), the group offers "Securing technology for you".

### Corporate group product overview

In its window technology, door technology, automatic entrance systems and building management systems divisions, the GU Group manufactures and distributes about 30,000 single items which are easy to combine.

### Securing technology for you

We use the major challenges of creating innovative and visionary system solutions to break new ground. Together with architects, planners and profile system manufacturers, we develop individual comprehensive solutions.

# Coordinated design lines for the entire building

High-quality products and hardware systems for all requirements

With more than **100 years of experience**, **technical know-how** and high-quality products, the Gretscht-Unitas Group is a synonym for safety, quality and functionality in architectural hardware and lock and security technology in the **rich tradition** of BKS and GU.

The highest maxim in product development is being able to see the bigger picture. We test how each detail interacts with functional, architectural, ecological, manufacturing and process-specific requirements – our **high-quality products** fulfil them.

The **diversity** and flexible compatibility of all products in the Group make it possible for architects to deliver **high-quality products that are adapted for each other** and **design lines** for projects. The competence to be able to cover everything makes us **unique in the market**.

The Group's range offers a broad spectrum of hardware for timber and steel doors as well as aluminium and PVC narrow stile doors. Just select the design and material that fits your particular application from our lever handle sets, touch bars or push bars. There are many alternatives for you to choose from, ranging from economic standard hardware to burglar-inhibiting models through to versions for fire protection, smoke protection and escape doors.

With the hardware solutions and lever handle series from the Gretscht-Unitas Group, you can plan and equip the entire building with consistent design. The **series range** also includes hardware for large-area elements such as Tilt&Slide and Lift&Slide hardware as well as escape doors. **You can meet all requirements from one source – made in Germany!**

Glenn Howells Architects & Urban Splash's Giraffe Communications, UK-Birmingham, London

Securing technology for you

# Barrier-free construction in accordance with DIN 18040

Hardware, motor-driven drives and thresholds for windows and doors

With kind permission of: Oliver Schuster, Stuttgart / baukunst philipp haus GmbH

The motor-driven **HS-Master** drive enables barrier-free construction with Lift&Slide elements

The classic **Lift&Slide elements** with hardware from Gretsch-Unitas have always provided for well-lit rooms and a pleasant living atmosphere. Innovative special solutions also help fulfil individual requirements.

Thanks to the wide range of accessories and perfectly coordinated functional components such as **HS-Master** drives, **Speed-Limiter**, thresholds and rollers, gears and turn handles, even large and heavy sashes are easy to operate, thus making them barrier-free in accordance with DIN 18040.

**Extended turn handle** to reduce operational force

Gretsch-Unitas has offered Lift&Slide elements for 60 years. They are constantly optimised and, thanks to their construction, can also be retrofitted to existing doors.

The desire for greater convenience and barrier-free living is on the rise, both for the elderly and for people who are looking for a higher level of comfort. We have the right products for the entire building that meet all requirements, for example, automatic sliding doors, motor-driven Lift&Slide hardware such as the **HS-Master**, motor-driven locks or window opening

The **GU-thermostep threshold** combines thermal characteristics for the highest requirements and barrier freedom in one

systems, system thresholds and much more. These are retrofittable systems and components that are coordinated both in visual aesthetics and in their functionality. That means: **simple operation whilst fulfilling the highest design and aesthetic demands.**

Barrier-free construction not only increases the degree of safety, it also increases convenience for everyone.

Suitable for barrier-free construction in compliance with

# Modern escape and rescue routes in accordance with EN 179 and EN 1125

Interplay of components

**19/RR series and 21/HS series**  
Electric escape door strike and EVP panic lock

**Electrically-locking touch bar (EVT)** –  
more safety in modern design

**FTNT escape door control unit** with innovative  
signalling concept

With the **rich tradition of the BKS brand**, the Gretscht-Unitas Group continues to produce groundbreaking system solutions to handle any requirement – from complex project solutions to simple, easily retro-fittable compact systems. These solutions are just one way in which the company demonstrates its expertise and market leadership in the area of locks and locking technology.

To ensure safe escape routes, the products from the Gretscht-Unitas Group can be combined for **innovative system solutions** with coordinated functions – from panic locks (mechanical, mechatronic, motor-driven and also with integrated radio control) via swing door drives, escape terminals with Electrically-locking locks through to escape route sliding doors.

With the new BKS escape door concepts, the **electrically-locking panic lock (EN 179)** or the **electrically-locking touch bar (EN 1125)** are combined with the electrical escape door control system as a compact solution in one hardware element, saving architects and fabricators significant time and planning resources.

The **electrical locking elements** for escape doors fulfil or exceed the high EltVTR and prEN 13637 requirements. They ensure that the door is released during emergencies – under preload as well.

The **escape door terminals** can be integrated via the included bus interface in door management systems such as BKS-NET.

The interaction between products from the Gretscht-Unitas Group **as tested units is unique to the market**. It means complete compatibility of all functions and consistent fulfilment of aesthetic demands.

# Panic functions applied to glass

with safety that is more than just design

Office building after hours provided courtesy of OJO Images / Getty Images collection

Hardware for glass doors with **PRIME OFFICE** equipped with various panic functions

The **PRIME OFFICE** hardware series can be combined with the **BKS radio battery lock**

**PRIME OFFICE** with a fixed knob on the outside of the door as panic function E

Glass as a building material has gained in importance not only for windows and facades but also for interior architecture. The trend for glass, especially in building interiors, is supported by enhanced product functionality and versatile design options.

And this is only available from us: with the self-locking panic locks for **escape doors in accordance with EN 179** it is now also possible to realise toughened glass door assemblies with an outside lever which can be coupled mechanically via the key whenever necessary. The diverse locking and panic functions offer countless application solutions.

In combination with the **BKS radio battery lock** for escape doors, access solutions or building management solutions, even the wiring becomes unnecessary.

Compatible among each other functionally and visually, the locks of the **PRIME OFFICE range** allow for innovative, sophisticated applications on glass doors. With this series, proven BKS lock functionality can be combined with glass. This results in completely new uses for glass doors and toughened glass assemblies for an innovative design spectrum with an unmatched level of function.

# More than just products

Service, planning, seminars

Solutions tailored to the project

Our service: consultation and planning

Large selection for the most varied types of projects

## Our services in building project consulting

Our building project consultants can offer you support when creating drafts, door lists, concept drafts with functional descriptions, invitations to tender and with cable diagrams for specific projects. Well thought-out system solutions, all of them adapted for each other, guarantee the desired and expected functionality whilst taking into account the particular standards and directives. In cooperation with the development and applications technology department, we can also find well-tailored solutions for special constructions.

As a matter of course we continuously provide information about new products and innovations as well as on relevant standards and directives and their immediate consequences during the planning and building phase.

## Gretsch-Unitas – your partner in planning

Together with you, we will work out the necessary requirements for the desired functionality, if required, and create an individual overall concept. Comfort and safety are our top priorities when opening, closing and monitoring doors and windows. To that end, we do not merely concentrate on individual products, but design a complete solution, taking into account multiple cross-trade equipment interfaces. Building security, protection of life and valuables, barrier freedom and convenient operation are often at odds in terms of individual requirements. We will find the optimal solution for you.

The spectrum of services we offer includes ascertaining the requirements for functionality, the conception and creation of different cross-trade equipment solutions up to the handover to your customers. Our main thought and guiding principle is always the product with its use. Our customers and the end user, who has been waiting for a reliable and functional solution, are, primarily, our top priority. This is why we have become a reliable partner for people across the globe.

## Our seminars with certified advanced training credits for architects

Gretsch-Unitas offers you the opportunity to always be at the forefront of technology, standards and product innovations and keep informed about system solutions with its expert seminars.

The seminar topics are diverse and give you a holistic overview of the newest industry trends with regard to modern architecture, standards and directives. Our system solutions and certifications are, of course, also discussed there.

The individual GU Group seminars have been certified as advanced training events by several Chambers of Architects and Engineers. This means that your seminar attendance can be recognised as advanced training credits.

# The new Construction Products Regulation (CPR)

CE marking redefined – on the safe side with GU

Modern architect's desk provided courtesy of E+ / Getty Images collection

In July 2013, the new Construction Products Regulation (CPR) replaced the Construction Products Directive (CPD) which had been valid since 1989. Construction products introduced to the market after 1 July 2013 must fulfil the requirements of the CPR. Products that were already on the market before this point are not affected.

## **Construction Products Regulation CPR 2013, Europe-wide, binding, consistent guidelines**

The CPR regulates the market introduction of construction products so that buildings are developed and realised in such a way that they do not endanger the safety of people or goods nor damage the environment. To achieve these goals, the regulation defines harmonised standards for important characteristics of construction products. A Declaration of Performance is required for products that are covered by a harmonised standard.

Unlike previous construction product directives that required implementation using national laws, the legal form of a regulation has now been chosen, which grants it direct legal validity in all European member states. This results in European-wide CE marking in accordance with consistent specifications, thus preventing varying national provisions. This supports free movement of goods and the unlimited use of construction products, creating more transparency and more comparable conditions throughout Europe.

The Declaration of Performance (DoP) will become the main document with which construction product manufacturers will take responsibility for the conformity of their products with the

declared performance. It is the foundation for CE marking and must be available for each construction product. The CE marking on the construction product signals the product's compliance with the declared performance.

We make all Declarations of Performance for GU Group construction products available on our homepage as "DoP" downloads:

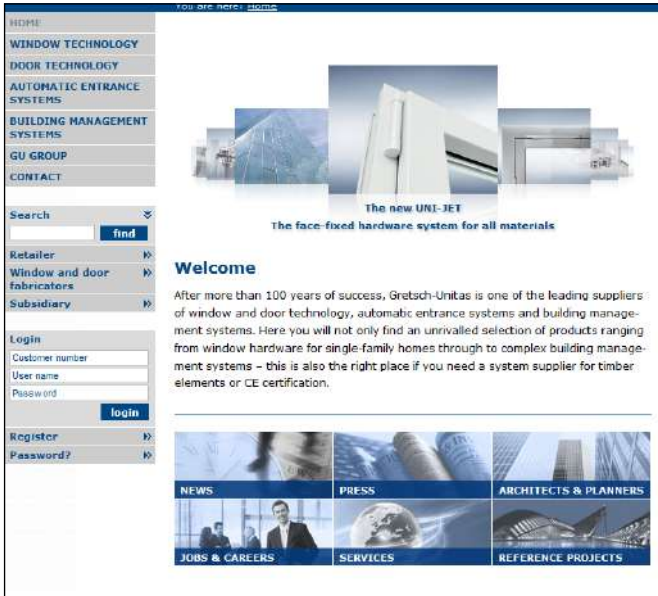

**<http://www.g-u.com/en/services/construction-products-regulation.html>**

The entry into force of the CPR also sees the introduction of market monitoring throughout Europe. In Germany, this is implemented by the Deutsche Institut für Bautechnik (DIBt), an authority of the German state governments for uniform fulfilment of technical tasks in the field of public law. Violations can be punished with administrative fines and/or imprisonment.

In the Gretsche-Unitas Group, products used in escape and rescue routes or with requirements for fire and smoke protection are affected by the CPR. We have labelled the corresponding products and product groups in the catalogue with our pictographs. This makes it easy for you to quickly recognise CPR conformity at a glance. Our comprehensive product range is designed for high stress, performance reliability and durability and coordinated within itself. The diversity of the Group's range provides you with many advantages.

You can always expect certified premium quality products from us in accordance with EN ISO 9001.

On our website:  
<http://www.g-u.com/en/services/construction-products-regulation.html>  
 you can download certificates and **Declarations of Performance (DoPs)** for our products.

You can also find complementary documents such as the Environmental Product Declaration and clearance certificate in accordance with the REACH regulation

Clearance certificate / REACH

Declaration of Performance

# Door hardware with maintenance-free lever handle bearing

Premium quality – certified in accordance with EN 1906, grade 4

## Maintenance-free lever handle hardware for project doors made from timber, steel and narrow stile frames.

With the design-oriented hardware for project doors, the maintenance intervals prescribed by the manufacturer no longer apply as the new product range includes maintenance-free lever bearings and an integrated lubricant reservoir.

All project hardware you receive has the maintenance-free lever bearing, irrespective of the selected set type and lever handle model. This gives you a wide **selection for the most diverse applications in any type of building.**

The hardware sets are suitable for use on fire protection, smoke protection and escape doors. Through-fixing with robust fasteners guarantees that the hardware is firmly attached to the door. All lever handles can be moved comfortably and softly without any noise. The maintenance-free lever bearing hardware range includes seven different lever handle series with various lever

handle models. By combining the handles with different door knob models and backplate shapes you can create your own individual hardware variants.

The patented interlocking fasteners enable stable lever support. The particularly long lever mounting ideally accommodates axial and radial forces on project doors. Featuring fixed backplates with friction washers, retention springs and permanent lubrication, the lever sets achieve **grade 4 according to EN 1906.**

The range of hardware was developed so that different versions can be delivered as single components. The modular system and a reduced quantity of single components enable flexible warehousing.

# Reduced operational force in Lift&Slide elements

Tension springs – quality from the very start

Thanks to the use of tension springs in Lift&Slide gears, the operational force at the turn handle is significantly reduced for the user, **greatly increasing operating convenience**. The result is extremely easy operation of the Lift&Slide door for door weights of up to 400 kg, in particular.

If, for example, the door weight increases due to new glazing during a renovation, the operational forces also increase at the turn handle. The tension spring compensates for this increased force.

Retrofitted installation of the tension spring is also possible at any time in every Lift&Slide gear version and is normally recommended starting at door weights above 200 kg.

The tension spring for Lift&Slide gears is a result of many years of experience at Gretsche-Unitas in the area of Lift&Slide hardware.

# Standards at a glance

Classification code in accordance with EN 1906

Businesspeople looking at plans provided courtesy of Image Source / Getty Images collection

The definition of international standards, which constantly make compromises and are required to take specific national idiosyncrasies into account, often takes many years. During this period, technical advancement runs the risk of not being included in the standard. This can lead to requirements being reduced to account for the compromises that were made and the time that was lost.

Gretsch-Unitas has never, in its entire existence of more than a century, been satisfied with mediocrity.

Use of the most advanced technologies and the great innovative strengths of Gretsch-Unitas create the best results by always being one step ahead of the standards when it comes to quality, safety and durability.

In addition to increasing internationalisation of these requirements, which are, for example, reflected in European standards and regulations, the everyday demands for convenience, traffic, burglar inhibition, fire protection, etc. must also be taken into account.

Admittedly, this is not always easy.

With our innovative and modern product systems, we offer you maximum planning security. You also receive a high degree of freedom in construction thanks to our unique functional and design characteristics.

We have collected the most important standards and regulations on the following pages.

## Classification code EN 1906

EN 1906 defines the requirements and test methods for lever handles and doorknobs, documented in a so-called classification code. The eight numbers of the code stand for:

First number	Second number	Third number	Fourth number	Fifth number	Sixth number	Seventh number	Eighth number
Use category	Durability	Door dimensions	Fire resistance	Safety for persons	Corrosion resistance	Burglar resistance	Version
Four possible grades: <b>1 to 4</b>	Two possible grades: <b>6 to 7</b>	No classification	Nine possible grades: <b>0 to D1</b>	Two possible grades: <b>0 to 1</b>	Six possible grades: <b>0 to 5</b>	Five possible grades: <b>0 to 4</b>	Three possible grades: <b>A/B/U</b>

## EN 1906

Characteristics such as long-term function, corrosion resistance, free angle movement and offset of lever handles and doorknobs are tested using the definitions from EN 1906 *Locks and Architectural Hardware – Lever Handles and Doorknobs – Requirements and Test Methods*. The characteristics are presented in an eight-digit classification code. The individual categories expressed therein are:

### First number = use category

**Grade 1:** average frequency of use by persons who are motivated to take great care and from whom there is a very limited risk of incorrect application, e.g. interior doors in houses.

**Grade 2:** average frequency of use by persons who are motivated to take care, but where certain risks for incorrect application exist, e.g. interior doors in office buildings. The pulling force is 1,500 N with security class 0.

**Grade 3:** frequent public use or use by people with low motivation for careful usage from whom there is a high risk of incorrect application, e.g. interior doors in office buildings with public traffic. The pulling force is 2,500 N with security class 1. 40 Nm are required at the handle.

**Grade 4:** for use in doors that are frequently exposed to violent usage or malicious damage, e.g. in football stadiums, on drilling rigs, in barracks or public toilets. 60 Nm are required at the handle.

Due to the Gretschi-Unitas Group's high quality requirements, all maintenance-free lever bearing hardware can be included in the grade 4 use category.

### Second number = durability

**Grade 6:** average frequency of use: 100,000 test cycles

**Grade 7:** frequent use: 200,000 test cycles

### Third number = door dimensions

No classification

### Fourth number = fire resistance

**Grade 0:** not permitted for use in fire/smoke protection doors

**Grade A:** suitable for smoke protection doors

**Grade B:** suitable for fire/smoke protection doors

### Fifth number = safety for persons

This only applies to personal safety and is intended for lever sets that are able to handle increased pulling forces (e.g. on doors with adjoining staircases in which it is possible for people to hold onto the handle)

**Grade 0:** for normal purposes – in private areas

**Grade 1:** in cases where security requirements exist – in public areas

### Sixth number = corrosion resistance

**Grade 0:** no defined corrosion resistance

**Grade 1:** low corrosion resistance, 24 hours of salt spray, e.g. products for inside areas

**Grade 2:** moderate corrosion resistance, 48 hours of salt spray

**Grade 3:** high corrosion resistance, 96 hours of salt spray, products for outdoor areas, e.g. entrance doors

**Grade 4:** very high corrosion resistance, 96 hours

**Grade 5:** extremely high corrosion resistance, 240 hours of salt spray, products in areas with salty sea air or industrial regions with high levels of air pollution

### Seventh number = burglar resistance

**Grade 0:** hardware for non-burglar-inhibiting doors

**Grade 1:** low burglar inhibition

**Grade 2:** moderate burglar inhibition

**Grade 3:** strong burglar inhibition

**Grade 4:** extreme burglar inhibition

### Eighth number = version

**Type A:** hardware with spring support

**Type B:** hardware with sets with preloaded springs

**Type U:** hardware without sets with preloaded springs

# Standards at a glance

## Doors in escape and rescue routes in accordance with EN 179 and EN 1125

From a safety perspective, all doors in rescue routes are escape doors. They are to be labelled accordingly and equipped with panic exit devices in accordance with European standards.

Lock, hardware and fixing accessories are tested together and may only be used as a tested unit.

In addition to CE marking, they must also be marked with a classification code.

### Scope of the test values

The test values defined in both standards apply to both 1-leaf and 2-leaf door elements. Likewise, the test values apply to locking systems that have additional locking elements such as esgagnollette bolts or multi-point locking.

### Emergency exit devices in accordance with EN 179

are designed for buildings or building sections that are not open to the public, i.e. where users are familiar with the function of the escape doors. They are suitable for all applications where public traffic may be excluded.

#### Application examples:

- Private housing
- Classrooms in schools
- Administrative buildings of industrial concerns not accessible to the public
- Areas in event buildings not accessible to the public
- Areas in airports, banks, shopping centres, etc. not accessible to the public

**Lever handles or push pads are required as operating elements.**

### Easy opening of escape routes through emergency exit locking systems in accordance with EN 179

During a durability test, all locking elements must be unlocked and the door released in the escape direction. To test under conditions that are as realistic as possible, the door element is pre-stressed with a force of 25 newtons to simulate the seal resistance. To achieve release with the maximum permissible tripping force of 70 newtons, low-friction interaction between the lever bearing, locking elements of the lock as well as the corresponding intake in the door frame is required. Upon completion of the durability test, the locking systems are also subjected to a vandalism test to prove suitability for daily use.

**Escape doors in accordance with EN 179 –**  
No public access, office example

### Panic exit devices in accordance with EN 1125

are used in public buildings or building sections where visitors who are not familiar with the function of the escape doors must still be able to safely operate them without instruction in the event of an emergency. The objective is to provide a safe escape route with minimum effort and without previous knowledge about panic exit devices. Even if there is pressure on the door (preload), panic exit devices must release safely (maximum 220 N at a pressure of 1,000 N on the door).

#### Application examples:

- Hospitals
- Escape routes in schools
- Public administration
- Areas in event buildings accessible to the public (cinema, theatre)
- Public areas in airports
- Public areas in shopping centres, etc.

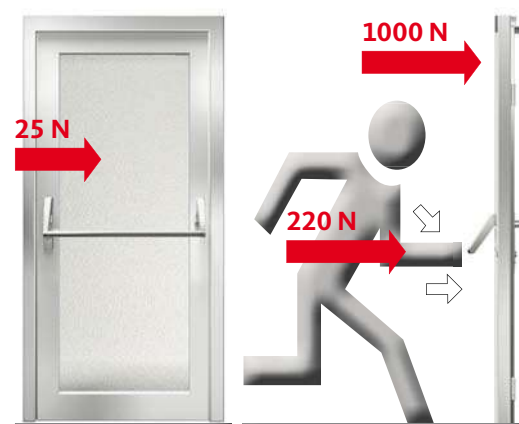

**Push bars or touch bars are required as operating elements.**

#### Easy opening of escape routes through panic exit devices according to EN 1125

Each locking system is checked for suitability in two different tests. Panic exit devices are also subjected to a preload of 25 newtons to simulate seal resistance. In the first test, the maximum permissible opening force of 80 newtons is used for testing to achieve release in the escape direction. During the second test, the door is placed under an additional preload of 1,000 newtons to simulate the simultaneous impact of several people against the door element. In this case, the maximum permissible tripping force of 220 newtons may not be exceeded. Upon completion of the durability test, the locking systems are also subjected to a vandalism test to prove suitability for daily use.

Test 1: Door without preload

Test 2: Door with a preload of 1,000 N

**Escape doors in accordance with EN 1125 –**  
With public traffic, theatre example

#### Recommended use:

If the later use of the building is not clearly defined at the beginning of planning, panic exit devices in accordance with EN 1125 should preferably be installed. This also applies when it is foreseeable that the use of a building will change at a later time. Otherwise, considerable retrofitting operations may become necessary if the building must be inspected again.

# Standards at a glance

## DIN 18257 (supplementary standard) Security hardware and security rosettes

Security hardware and security rosettes are intended to protect locks against burglary attempts. The requirements placed on them are regulated in DIN 18257. The purpose of security hardware in accordance with this standard is to protect the door pin of the lock and the profile cylinder against unauthorised mechanical manipulation of the door with the aim of breaking into the room protected by the door.

Security hardware and security rosettes in accordance with this norm are classified in four resistance classes with regard to the burglar-inhibiting effect.

- ESO = low burglar inhibition
- ES1 = moderate burglar inhibition
- ES2 = strong burglar inhibition
- ES3 = extreme burglar inhibition

The thickness of the exterior backplate or the exterior rosette is to be selected by the user or installer such that the portion of the profile cylinder that extends beyond the surface of the door from the lock case is covered. Its housing may extend a maximum of 3 mm from the exterior backplate.

Security hardware and security rosettes in accordance with DIN 18257, in particular, are used on doors where increased burglar protection is required, such as on entrance doors in homes and secondary entrance doors.

## DIN 18273: Lever handle units for fire and smoke protection doors

Hardware for fire and smoke protection doors is approved by the building authorities. The requirements that need to be met are defined in DIN 18273 *Architectural Hardware - Lever Handle Units for Fire Protection Doors and Smoke Protection Doors - Terms, Dimensions, Requirements and Tests*. Afterwards the lever handle units must be constructed so that the function and protective effect of the hardware is permanently ensured, even after long-term use when used appropriately and with appropriate maintenance. The standard applies to all lever handle constructions in 1-leaf or 2-leaf versions.

Lever handle units in accordance with DIN 18273 are used in fire and smoke protection doors. This consists of a lever handle hole component with a rotating bearing and tension on both sides (inside and outside), an external and internal backplate and a two-part split panic spindle, of which both parts are firmly connected to each other but can still rotate, and the corresponding fasteners.

Lever handle units in accordance with DIN 18273 are to be marked as follows:

- Manufacturer's logo
- DIN 18273 FS (fire protection set)  
or DIN 18273 RD (smoke protection set) specification

If the lever handle sets are in accordance with DIN 18273, they also fulfil the requirements in accordance with DIN 4102-5 *Fire Behaviour of Building Materials and Components; Fire Barriers, Barriers in Lift Wells and Glazings Resistant against Fire, Definitions, Requirements and Tests* and DIN 4102-18 *Fire Behaviour of Building Materials and Components; Fire Barriers; Proof of the "Self-Closing" Characteristic (Durability Test)* as well as DIN 18095-1 *Doors; Smoke Protection Doors; Definitions and Requirements* and DIN 18095-2 *Doors; Smoke Protection Doors; Type Testing for Operational Reliability and Leakage*.

### **EN 13126-5**

#### **Hardware for windows and balcony-doors**

*Architectural Hardware – Hardware for Windows and Balcony-Doors – Requirements and Test Methods – Part 5: Windows and Balcony-Doors*

defines the requirements and test methods for the operational reliability, stability, protection and functional principle of devices for limiting the opening angle of windows and balcony-doors. The standard provides information about the security requirements to be fulfilled by devices that limit the opening angle of windows and balcony-doors with a nine-digit classification code. This is organised as follows:

First position: use category (no grade defined)

Second position: operational reliability (different grades possible)

Due to the high quality requirements of the Gretsch-Unitas Group, all Tilt&Slide and Lift&Slide hardware passes the equivalent of a durability test of the highest grade with 25,000 test cycles.

Third position: dimensions (different grades possible)

Fourth position: fire resistance (grade 0: no requirement)

Fifth position: secure use (one class possible)

Sixth position: corrosion resistance (at least grade 3 in accordance with EN 1670)

All Tilt&Slide and Lift&Slide hardware from the GU Group fulfils the best possible corrosion resistance grade with 240 hours of salt spray, such as that required for products used in areas with salty sea air or industrial areas with high levels of air pollution, for example.

Seventh position: protection (no grade defined)

Eighth position: used component (specification 16)

Ninth position: test sizes (various grades possible)

### **EN 13126-15**

#### **Hardware for horizontal sliding and Fold&Slide windows**

*Architectural Hardware – Hardware for Windows and Balcony-Doors – Requirements and Test Methods – Part 15: horizontal sliding and Fold&Slide Windows and Balcony-Doors*

defines the requirements and test methods for the operational reliability, stability, protection and functional principle of bogies for windows and balcony-doors with sliding windows and Fold&Slide windows that open inwards or outwards. The standard applies to adjustable and non-adjustable bogies. The hardware characteristics are presented in a nine-digit classification code. This is done in the same way as already described for the EN 13126-5 standard.

### **EN 13126-16**

#### **Hardware for Lift&Slide systems**

The requirements and test methods for the operational reliability, stability and protection as well as the functional principle of hardware for Lift&Slide systems are defined in EN 13126-16.

The hardware characteristics are presented in a nine-digit classification code in the same way as described for EN 13126-5.

### **EN 13126-17**

#### **Hardware for Tilt&Slide windows and balcony-doors**

The requirements and test methods for the operational reliability, stability and protection as well as the functional principle of hardware for Tilt&Slide windows and balcony-doors are defined in EN 13126-17.

The hardware characteristics are presented in a nine-digit classification code in the same way as described for EN 13126-5.

# Materials and finishes

The finishes and materials are for all window and door handles. We use high-quality aluminium alloys for the hardware range. Our stainless steel hardware is rust-free and distinguished by its outstanding performance characteristics.

### Finish: 1 – silver / EV1 look

With its cool, slightly reflective finish, the silver/EV1 look offers the perfect complement to modern interiors. This robust finish stands out thanks to its impact- and scratch-resistance, in particular.

### Finish: 8 – matt stainless steel

The matt stainless steel finish is particularly durable, making it an ideal, environmentally friendly alternative to other surface coatings.

### Finish: 7 – white (RAL 9016)

Thanks to product-specific coating processes, optimally resistant finishes with particularly long-lasting durability can be achieved, even in diverse RAL tones.

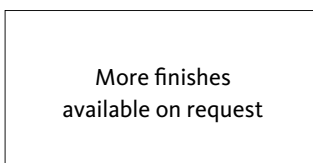

### Finish: 3 – brass PVD

Our high-quality hardware in brass look is manufactured from stainless steel with a coating of titanium (PVD). Outstanding characteristics such as corrosion resistance, wear resistance and low maintenance distinguish this finish.

### Finish: 9 – more finishes available on request

On request, you can also receive our hardware solutions in various special colours. Individual design solutions and colour concepts can thus be realised throughout the entire building.

#### \*Order example I for selection of colour

Lever set with rosettes

Square spindle 8 mm = B-70000- □ □ -0- □

Cylinder hole / hole distance PC = 0

Lever model RONDO H1.0 = 0

Finish matt stainless steel = 8

More finishes are available on request

## List of abbreviations

To make sure our catalogue is easy to understand, we have listed the most common abbreviations here.

**WK** = warded keyhole

**Swiss RC** = Swiss round-cylinder hole

**PC** = profile cylinder hole

**BATH**

**CC** = cylinder cover

More abbreviations:

- FS** = fire protection
- HL** = mid length
- L&S** = Lift&Slide
- mZ** = with power control
- oZ** = without power control
- T&S** = Tilt&Slide
- PU** = Packing unit

## The following pictographs are used in this catalogue:

These products have been tested in accordance with EN 1125

These products have been tested in accordance with EN 179

These products are suitable for use in fire protection doors

These products have been tested in accordance with the directives for electronic locking systems for doors in rescue routes

These products can be integrated into door management systems such as BKS-NET

These products are CE-certified

These products have been tested in accordance with EN 1906

These products are suitable for barrier-free construction in compliance with DIN 18040

These products have been tested in accordance with EN 13126-15

These products have been tested in accordance with EN 13126-16

These products have been tested in accordance with EN 13126-17

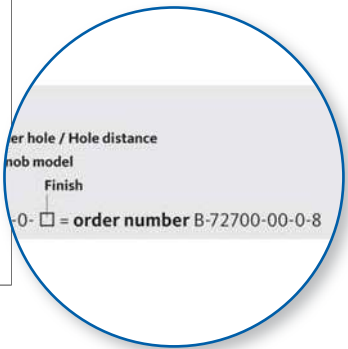

# Ordering made easy

## A brief overview

In chapter 2 (series overview) of this catalogue, you can find an overview of all available hardware from the Gretsch-Unitas Group, including available set variants.

Depending on which individual functions you would like, you can find your preferred handle variant, including the order number, in the order section.

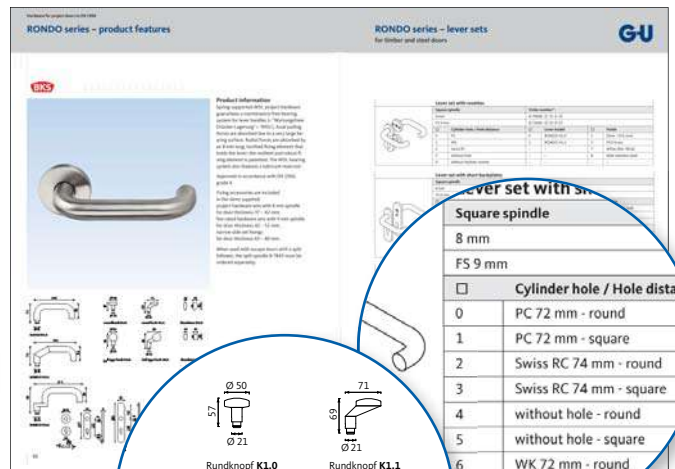

## Pictographs

There are different standards and regulations for door hardware, handles for window and large-format elements and associated products. Using the pictographs in this catalogue, you can get a quick overview of the standards conformity of our products.

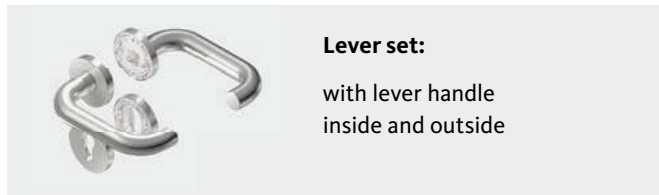

## Products

In addition to the product photograph and the dimensioned drawings, you can also find a detailed functional description and detailed product information on the double page spreads. The corresponding order numbers can be determined using the tables.

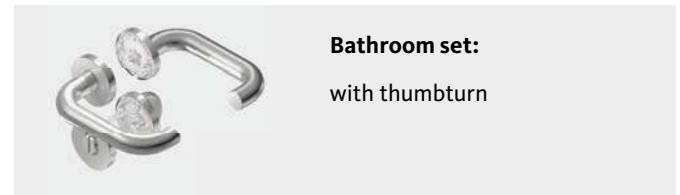

## Which set variant?

You can clearly see the difference in the 3D illustrations and figures.

**Lever set:**  
with lever handle  
inside and outside

**Bathroom set:**  
with thumbturn

**Entrance set:**  
with interior lever handle and  
exterior knob

**Half-set:**  
one-sided lever handle;  
also optionally available as a  
half-set with knob

## DIN left or DIN right?

The order numbers in the catalogue differ depending on whether the door opens inwards or outwards, or towards the right or the left.

### Door opening outwards

<p><b>Entrance set, right</b></p> <p>Interior: lever handle pointing to the right</p> <p>Exterior: knob pointing to the left</p>	<p>outside</p> <p>inside</p> <p>DIN left door</p>	<p>outside</p> <p>inside</p> <p>DIN right door</p>	<p><b>Entrance set, left</b></p> <p>Interior: lever handle pointing to the left</p> <p>Exterior: knob pointing to the right</p>
--	---	--	---

### Door opening inwards

<p><b>Entrance set, right</b></p> <p>Interior: lever handle pointing to the right</p> <p>Exterior: knob pointing to the left</p>	<p>outside</p> <p>inside</p> <p>DIN right door</p>	<p>outside</p> <p>inside</p> <p>DIN left door</p>	<p><b>Entrance set, left</b></p> <p>Interior: lever handle pointing to the left</p> <p>Exterior: knob pointing to the right</p>
--	--	---	---

# EVT electrically-locking touch bar

for timber, steel and narrow stile doors

## Product information

Integration of an escape door lock complying with EltVTR into a touch bar on 1-leaf or 2-leaf panic exit devices. The LED display on the electrically lockable touch bar (EVT) clearly signals the status as "locked" or "unlocked". When locked, the door is always secured by the locking points of the panic lock. The EVT prevents functional impairments and/or damage of the door resulting from attempts to gain unauthorised access.

### 10 m connecting cable included

#### Technical data:

- Supply voltage
- LED: 24 V DC / 100 mA
- Nominal voltage: 24 V DC  $\pm$  10%
- Current consumption: 100 mA
- Monitoring contact: 24 V DC / 100 mA

Can be used in conjunction with the FTNT10 and FTNT20 escape door control systems and networked via the BKS-NET door bus interface.

For further information refer to the catalogues 'System solutions for narrow stile doors' (or 'timber and steel doors', respectively).

Some products of this series are suitable for use in compliance with

# RONDO series – product features

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever; the resilient and robust fixing element is patented. The WDL bearing system also features a lubricant reservoir.

Approved in accordance with EN 1906, grade 4.

Fixing accessories are included in the items supplied:  
 project hardware sets with 8 mm spindle for door thickness 37 – 42 mm;  
 fire-rated hardware sets with 9 mm spindle for door thickness 42 – 52 mm;  
 narrow stile set fixings for door thickness 65 – 80 mm.

When used with escape doors with a split follower, the split spindle B-7843 must be ordered separately.

Some products of this series are suitable for use in compliance with

# BELCANTO series – product features

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever; the resilient and robust fixing element is patented. The WDL bearing system also features a lubricant reservoir.

Approved in accordance with EN 1906, grade 4.

Fixing accessories are included in the items supplied:  
 project hardware sets with 8 mm spindle for door thickness 37 – 42 mm;  
 fire-rated hardware sets with 9 mm spindle for door thickness 42 – 52 mm;  
 narrow stile set fixings for door thickness 65 – 80 mm.

When used with escape doors with a split follower, the split spindle B-7843 must be ordered separately.

Some products of this series are suitable for use in compliance with

# DIRIGENT series – product features

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever; the resilient and robust fixing element is patented. The WDL bearing system also features a lubricant reservoir.

Approved in accordance with EN 1906, grade 4.

Fixing accessories are included in the items supplied:  
 project hardware sets with 8 mm spindle for door thickness 37 – 42 mm;  
 fire-rated hardware sets with 9 mm spindle for door thickness 42 – 52 mm;  
 narrow stile set fixings for door thickness 65 – 80 mm.

When used with escape doors with a split follower, the split spindle B-7843 must be ordered separately.

round knob K1.0

# OFFICE series – product features

### Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever; the resilient and robust fixing element is patented. The WDL bearing system also features a lubricant reservoir.

Approved in accordance with EN 1906, grade 4.

Fixing accessories are included in the items supplied:  
 project hardware sets with 8 mm spindle for door thickness 37 – 42 mm;  
 fire-rated hardware sets with 9 mm spindle for door thickness 42 – 52 mm;  
 narrow stile set fixings for door thickness 65 – 80 mm.

When used with escape doors with a split follower, the split spindle B-7843 must be ordered separately.

Some products of this series are suitable for use in compliance with

# LEGATO series – product features

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever; the resilient and robust fixing element is patented. The WDL bearing system also features a lubricant reservoir.

Approved in accordance with EN 1906, grade 4.

Fixing accessories are included in the items supplied:  
 project hardware sets with 8 mm spindle for door thickness 37 – 42 mm;  
 fire-rated hardware sets with 9 mm spindle for door thickness 42 – 52 mm;  
 narrow stile set fixings for door thickness 65 – 80 mm.

When used with escape doors with a split follower, the split spindle B-7843 must be ordered separately.

Some products of this series are suitable for use in compliance with

# TREMOLO series – product features

### Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever; the resilient and robust fixing element is patented. The WDL bearing system also features a lubricant reservoir.

Approved in accordance with EN 1906, grade 4.

Fixing accessories are included in the items supplied:  
 project hardware sets with 8 mm spindle for door thickness 37 – 42 mm;  
 fire-rated hardware sets with 9 mm spindle for door thickness 42 – 52 mm;  
 narrow stile set fixings for door thickness 65 – 80 mm.

When used with escape doors with a split follower, the split spindle B-7843 must be ordered separately.

Some products of this series are suitable for use in compliance with

# RONDO series – product features

for glass doors

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever; the resilient and robust fixing element is patented. The WDL bearing system also features a lubricant reservoir.

Approved in accordance with EN 1906, grade 4.

Fixing accessories are included in the items supplied:  
9 mm spindle for fire-rated sets,  
door thickness 42 – 52 mm.

When used with escape doors with a split follower, the split spindle B-7843 must be ordered separately.

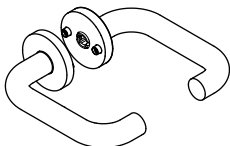

Some products of this series are suitable for use in compliance with

# OFFICE series – product features

for glass doors

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever; the resilient and robust fixing element is patented. The WDL bearing system also features a lubricant reservoir.

Approved in accordance with EN 1906, grade 4.

Fixing accessories are included in the items supplied:  
9 mm spindle for fire-rated sets,  
door thickness 42 – 52 mm.

When used with escape doors with a split follower, the split spindle B-7843 must be ordered separately.

Some products of this series are suitable for use in compliance with

# RONDO series, security hardware ES1 – product features

for narrow stile doors

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever. Fixing accessories for door thickness 54 – 69 mm are included in the delivery.

Approved in accordance with EN 1906, grade 4.

The cylinder cover is suitable for a cylinder projection of 10 to 15 mm.

Some products of this series are suitable for use in compliance with

# BELCANTO series, security hardware ES1 – product features

for narrow stile doors

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever. Fixing accessories for door thickness 54 – 69 mm are included in the delivery.

Approved in accordance with EN 1906, grade 4.

The cylinder cover is suitable for a cylinder projection of 10 to 15 mm.

# BELCANTO series, security hardware ES1 – product features

for narrow stile doors

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever. Fixing accessories for door thickness 54 – 69 mm are included in the delivery.

Approved in accordance with EN 1906, grade 4.

The cylinder cover is suitable for a cylinder projection of 10 to 15 mm.

Some products of this series are suitable for use in compliance with

# LEGATO series, security hardware ES1 – product features

for narrow stile doors

## Product information

Spring-supported WDL project hardware guarantees a maintenance-free bearing system for lever handles (= "Wartungsfreie Drücker-Lagerung" = 'WDL'). Axial pulling forces are absorbed due to a very large bearing surface. Radial forces are absorbed by an 8 mm long, toothed fixing element that holds the lever. Fixing accessories for door thickness 54 – 69 mm are included in the delivery.

Approved in accordance with EN 1906, grade 4.

The cylinder cover is suitable for a cylinder projection of 10 to 15 mm.

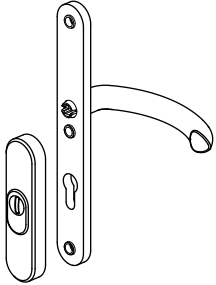

Some products of this series are suitable for use in compliance with

# Gasket plate for turn handle and flush pull

## Gasket plate for exterior and interior turn handle

The optional gasket plate which is universally usable for all handle models provides increased tightness, especially in Blower-Door-Tests. The profile cylinder insert is removable so the gasket ensures optimal sealing for all handle variants.

### Versions / Order numbers

Description	Material	Order number
Gasket plate for turn handle	-	9-47210-01-0-6

## Gasket plate for flush pull

The optional gasket plate which is universally usable for all flush pulls provides increased tightness, especially in Blower-Door-Tests. The adaptable gasket plate ensures optimal sealing for all flush pull models.

### Versions / Order numbers

Description	Material	Order number
Gasket plate for flush pull	-	9-47211-01-0-6

## Square spindles for window handles

The length of the optional square spindles must be determined depending on the spindle hole depth of the lock case. Wrongly dimensioned or short square spindles are not permissible as they cause damage to the window gear or handle.

### Square spindles 7 mm

PU [qty.]	Spindle length in mm	Sash thickness in mm	Order number
20	118	56 – 68	9-26874-56-0-1
100	131	69 – 80	9-26874-69-0-1
20	143	81 – 92	9-26874-81-0-1

## Square spindles for Tilt&Slide handles

The length of the optional square spindles must be determined depending on the spindle hole depth of the lock case. Wrongly dimensioned or short square spindles are not permissible as they cause damage to the window gear or handle.

### Square spindles 8 mm [1]

PU [qty.]	Spindle length in mm	Sash thickness in mm	Order number
1	90	up to 88	9-30482-90-0-1
1	135	> 88	9-30482-95-0-1 [2]
1	150	> 88	9-30482-96-0-1 [2]

[1] = For each square spindle for Tilt&Slide handles a reduction insert order number 9-30481-00-0-1 must be ordered separately  
 [2] = Also usable for handle on both sides

## Square spindles for Lift&Slide handles

The length of the optional square spindles must be determined depending on the spindle hole depth of the lock case. Wrongly dimensioned or short square spindles are not permissible as they cause damage to the window gear or handle.

# Standards and regulations at a glance

For doors and products related with doors, there is a whole range of standards and directives. The most important (European) standards are:

## **DIN 107**

Building construction; identification of right and left side

## **DIN 1080, part 1**

Definitions, symbols and units in civil engineering, basics

## **DIN 4102, part 5 + 18**

Part 5: Behaviour of building materials and components in fire; fire barriers, barriers in lift wells and against fire resistant glazings

Part 18: Fire behaviour of building materials and components; fire barriers, verification of automatic closure (continuous performance test)

## **DIN 18 040, part 1 + 2**

Construction of accessible buildings

Part 1: Publicly accessible buildings

Part 2: Dwellings

## **DIN 18 055**

Windows; air permeability of joints, water tightness and mechanical strain; requirements and testing

## **DIN 18 082, part 1 + 3**

Part 1: Fire barriers, steel doors T30-1, type A

Part 3: Fire barriers, steel doors T30-1, type B

## **DIN 18 095, part 1 + 2**

Part 1: Doors; smoke control doors; definitions and requirements

Part 2: Doors; smoke control doors; type testing of durability and tightness

## **DIN 18 100**

Doors; wall openings for doors; dimensions according to DIN 4172

## **DIN 18 101**

Doors, doors for residential buildings; sizes of door leaves, position of hinges and lock; interdependence of dimensions

## **DIN 18 111, part 1**

Door frames, steel door frames, standard door frames for rebated doors in masonry

## **DIN 18 250**

Mortise locks for fire doors and smoke control doors

## **DIN 18 251**

Locks; mortise locks for doors

## **DIN 18 252**

Profile cylinders for door locks; terminology, designations

## **DIN 18 255**

Building hardware; door lever handles, backplates and escutcheons – definitions, dimensions, requirements and marking

## **DIN 18 257**

Building hardware; security hardware – terms, dimensions, requirements, tests and markings

## **DIN 18 273**

Building hardware; lever handle units for fire doors and smoke control doors – concepts and definitions, requirements and testing

## **DIN 18 357**

German construction contract procedures (VOB), part C: General technical specifications in construction contracts (ATV) – mounting of door and window hardware

## **DIN 18 361**

German construction contract procedures (VOB), part C: General technical specifications in construction contracts (ATV) – glazing work

## **DIN 68 706, part 1**

Interior doors made from wood and wood-based panels, door leaves – concepts, sizes, requirements

## **EN 179**

Emergency exit devices operated by a lever handle or push pad

## **EN 1125**

Panic exit devices operated by a horizontal bar

## **EN 1154**

**Building hardware – controlled door closing devices**

## **EN 1303**

Building hardware – cylinders for locks – requirements and test methods

## **EN 13126, part 5**

Building hardware – Hardware for windows and balcony-doors – Requirements and test methods

Part 5: Devices that restrict the opening of windows and door height windows;

## **EN 13126, part 15**

Building hardware – Requirements and test methods for windows and door height windows

Part 15: Horizontal sliding and sliding-folding windows and doors

Part 16: Hardware for Lift&Slide windows and doors

Part 17: Hardware for Tilt&Slide windows and doors

**EN 1627**

Windows, doors, shutters – Burglar inhibition – Requirements and classification

**EN 1628**

Pedestrian doorsets, windows, curtain walling, grilles and shutters – burglar resistance – test method for the determination of resistance under static loading

**DIN EN 1629**

Pedestrian doorsets, windows, curtain walling, grilles and shutters – burglar resistance – test method for the determination of resistance under dynamic loading

**EN 1630**

Windows, doors, shutters. Burglar resistance. Test method for the determination of resistance to manual burglary attempts

**EN 1634, part 1 + 3**

Fire resistance tests for doors and shutter assemblies

Part 1: Fire control doors and shutters

Part 3: Smoke control doors and shutters

**EN 1906**

Building hardware – lever handles and knob furniture – requirements and test methods

## Quality: GU and BKS successfully certified

EN ISO 9001:2008 defines a company's structural, operational and quality management requirements.

In 1995, the AGQS e.V. accreditation association certified Gretsch-Unitas GmbH Baubeschläge's successful implementation of a quality control system in compliance with EN ISO 9001:2008.

The manufacturing of high-quality hardware is of constant concern for GU. The certification programme also confirms that the internal company processes – from development right through to sales and customer service – coincide with this concern.
